

## Media Advisory

### OzVision to Demonstrate its New OzVision Secure Network (OSN) at NRF Loss Prevention Conference & Exhibition

**Minneapolis, Minn. - NRF Loss Prevention Conference & Exhibition, Booth #146 -- June 5, 2006** – OzVision, a leading developer of advanced video solutions for the security monitoring market, today announced it will be participating in the NRF Loss Prevention Conference & Exhibition, June 5-7, 2006 in Minneapolis, Minn.

**What:** Retailers are being impacted by clear and present pain represented by the risk of break-ins, high number of thefts, escalating false alarm fees, costly guard services that many have had to eliminate, and ineffective management of remote locations that rely on alarm systems that require store managers to verify an intrusion in person. Combined, these factors call for more timely, cost-effective approaches that leverage new technologies and verified response techniques using remote video capabilities.

Retailers seeking advanced, Internet-enabled security solutions that effectively integrate closed-circuit television (CCTV) and alarm systems will benefit from learning about the OzVision Secure Network (OSN). OSN provides remote monitoring capabilities with real-time access for business owners through SecureView™ – a branded, user friendly, Internet-based portal from which subscribers can view, record, retrieve and control monitoring settings through a browser-based application.

**When:** Taking place June 5-7, 2006, the NRF Loss Prevention Conference & Exhibition is the nation's leading retail-specific loss prevention event, attended by more than 2,600 loss prevention, risk management and asset protection professionals.

The exhibit hall will be open Monday, June 5 from 3:00 – 7:00 PM; Tuesday, June 6 from 12:30 – 5:30 PM and Wednesday, June 7 from 11:00 AM – 2:30 PM. For more information, visit <http://www.nrf.com/lossprevention/>.

**Where:** Minneapolis Convention Center, Minneapolis, Minn. OzVision will be exhibiting at booth # 146.

#### About OzVision

Established in 1995, OzVision develops and markets cost-effective remote video compression technology for the security, cellular telecommunications and data communications industries. OzVision's remote video compression technology enables the transmission and control of quality streaming video images over broadband, satellite, as well as low-bandwidth environments, including standard phone lines and cellular networks. This advanced technology provides a new level of security through a wide range of video services, including video verification, guard tours, inventory management, nanny watch and more. For more information, visit <http://www.ozvision.com>.
