

See What You've Been *Missing*

Video Solutions for Security and Remote Management

OzVision
REMOTE VIDEO SOLUTIONS

Let us show you what you've been missing.

From video verification at the central station to video e-mail on events and even look-in capabilities, OzVision lets you see what you've been missing. With advanced video compression technology that delivers high quality images from remote sites over any telephone line, including cellular, you now have a reliable method of immediate response to deter crime and manage your business.

Video images from before and after the alarm is triggered are transmitted directly to your central station - a perfect solution to the false alarm problem and the no response from police policies. Non-emergency events can be e-mailed directly to your computer, laptop or handheld PDA for immediate notification.

It's no wonder that OzVision has become the standard in video surveillance and remote management.

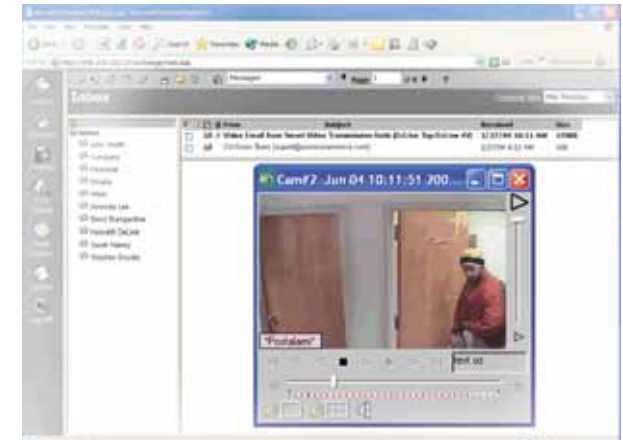

You've Got Video Mail!

OzMail is a service offered by your alarm service provider that e-mails video events directly to your e-mail program. Every aspect of your business from Open/Close Video Reports, Automated Video Guard Tours and events may be e-mailed directly to your computer or laptop as an attachment and then easily viewed using the free OzMail video player.

Simply double-click and the video window pops up on screen with a small, compressed video file. It can even be sent to a handheld PDA!

1 Event Occurs at Remote Location

2 Video File is Transmitted to Central Station

3 Central Station Receives Video and Responds

4 OzMail Enabled Units Then Automatically Transmit Video File to Any E-mail Address

for Security

- Verify alarms and eliminate false alarm fines
 - Monitor your children coming home from school
 - Watch your business with remote video surveillance

Video Verification

Receiving video images from before and after alarm activation will enable monitoring operators to prioritize and verify alarms - a perfect solution to the false alarm and no response from police problems.

Events

Keep an eye on any event at your business including opening the safe, transaction cancellations, back door openings, machine malfunctions...the possibilities are endless.

Video Guard Tours

Reduce or even eliminate your need for onsite guard services. Automatically scheduled video guard tours can be viewed at your central station.

Open/Close Video Reports

Now you can see who went in or out, whether anyone was with them and if they carried anything away!

for Remote Management

- Save time and money by eliminating guard tours
 - Control access to sensitive materials
 - Monitor your home while you are away

Virtual Visits

Monitor the site as many times as you want each day and for any reason by receiving video e-mail clips. You select the cameras and visiting times.

Remote Access

Connect to an existing alarm system to remotely control external devices including lights, doors and sounders as well as pan/tilt/zoom functions.

Children Watch

Whether children are in day care, at home with a babysitter or even arriving home alone from school, parents can now keep an eye on their most precious possessions.

Endless Possibilities

From preventing employee theft to checking the stockroom to being notified when the safe is opened to watching how customers are treated, the possibilities are as unlimited as your imagination. You're now in control!

BENEFITS

Easy to install

Record and transmit activity before and
after the alarm triggers

Video transmission over standard phone
lines or even cellular

Remotely control external devices such
as cameras, lights, doors and sirens

No PC required on site
