Verification

Significantly minimize costly false alarm fines. Monitoring stations receive a video clip that show what happens before and after your alarm went off enabling dispatchers to prioritize and verify emergency situations.

Notification

Receive notice of any event, anytime and anywhere. OzMail™ sends video of events directly to your email. Patented video compression technology creates full color video files that can be easily downloaded even over a dial up internet connection.

Exploration

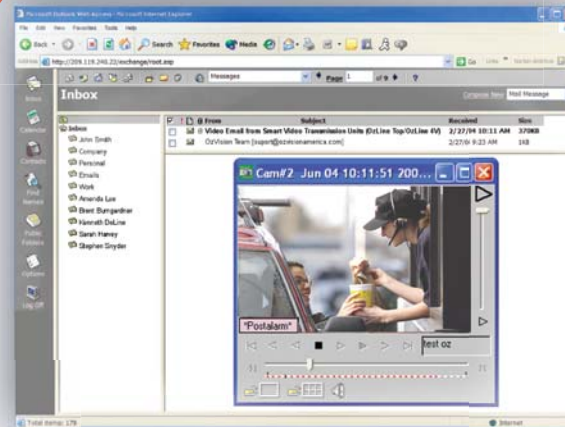

Look in and manage your business remotely as many times as you want each day. If the room is dark, you can even turn on the lights!

Total Control...

If you can surf the web you'll feel right at home using OzVision's viewer software. View live video from any of your cameras, remotely control external devices, and remotely manage the assets of your business.

The user friendly icon driven software offers you a professional video solution for any Windows based PC.

Video Email Services

If your security system is connected to a monitoring station you may also take advantage of OzMail.

Each time an event occurs, a video file is automatically emailed to your PC or POCKET PC device.

At home... or on the road

Video alarm notification and OzMail services may require additional charges from your alarm provider.
