

Corporate Fact Sheet

Profile: OzVision (www.ozvision.com) offers a complete out-of-the-box remote video platform to surveillance and telecom companies enabling them to provide affordable, video security and monitoring services, over a secure network, to both businesses homes alike. OzVisions' technology specifically addresses the challenges associated with the integration of alarm monitoring, CCTV, connectivity, network storage and remote video services and can be seamlessly coupled with existing monitoring infrastructures and DVR systems. It is also fully capable of functioning as a complete cost-effective, stand-alone, off-site, video security and business management solution.

OzVision's technology was developed in response to major issues facing the security industry such as False Alarms and Recurring Revenues:

- False Alarms continue to plague fire and safety officials in towns and cities throughout the United States, costing hundreds of millions of dollars and constantly putting lives on the line, unnecessarily.
- In addition, security service providers must find a way to grow their businesses by increasing monthly recurring revenues.

Founded: 1995

Offices: Corporate Headquarters - Woburn, MA, USA
R&D - Nahal Oz, Israel
Asia Pacific - Southport, Australia
Europe - The Hague, Netherlands

Management Team:

- Dr. Avi Fried – CEO and Chairman of the Board
- Dr. Alan Avidan – President OzVision Global
- Avi Lupo - Founder, President - OzVision Security Division
- Erez Freibach - CFO and VP Operations

Advisory Board: Shahar Belkin (Founder) Technology

Investors: OzVision is a privately held corporation that has received funding from Aviv Venture Capital and Kardan Communications

Solutions: OzVision is a proven technology innovator delivering the only PSTN-based solution to address the need to supply video services to the telephone line dominated alarm business.

Furthermore, OzVisions' Secure Network (OSN) extends the company's business model into Internet Protocol (IP) network-based solutions, effectively resolving the CCTV and intrusion integration challenge.

OSN is an Internet-based, hosted video monitoring network that enables security service providers to generate new recurring revenue streams from video services while also increasing the level of security provided to customers. OSN provides an affordable, reliable, high-performance remote video solution that can deliver real-time security monitoring features to subscribers through a branded, Internet-based portal that is accessible via personal computer, personal digital assistant or cell phone.
